avoid any mistakes.

Iris are without doubt the most satisfactory of all garden flowers. Hardy and so easy to grow. July, August and the first part of September are the best time to plant Iris in this section of the country for best results. If planted later it is well to use a light mulch in cold climates.

They should be planted in a sunny well drained location. Do not plant too deep. The top of the rhizome should be just covered with soil. If planted too deep they will not bloom satisfactorily.

We use Bone Meal almost entirely as a fertilizer, oc-

We use Bone Meal almost entirely as a fertilizer, occasionally we use well rotted barnyard manure or vigoro when we have a poor spot of ground.

They should be divided every 3 or 4 years so they do not become too crowded. Planting 3 of a variety in a group gives you a nice clumb of color in a hurry.

The rhizomes of some varieties grow larger than others, so do not condemn the small rhizomes too hastily. It may be the normal size for that variety. Most oncohreds have small rhizomes breds have small rhizomes.

#### HEMEROCALLIS

This popular perennial, commonly called Daylily, is truly the busy man's flower, as they need so little attention. They give such a huge amount of enjoyment for the little care they take. They do well in good garden soil in full sun or partial shade. They are hardy and can be left undisturbed for years. They can be planted at any time the ground can be worked. By careful selection of varieties you can have bloom from early Spring until Fall.
